

# HEALTHY BUILDINGS: A CARRIER COMMITMENT

You need a partner who prioritizes health. That's why Edwards is making buildings across America healthier from the inside out as part of Carrier's Healthy Buildings Program. Together, we're committed to providing customers with advanced solutions to deliver safer, more productive building environments.

## A SAFE BUILDING IS A HEALTHY BUILDING

Edwards is committed to helping you create healthier buildings that meet your needs with solutions to protect people and property. Inspire confidence and create productive environments thanks to highly capable life safety systems that feature the most advanced technology available.

## SAFE FROM EVERY ANGLE

At our core, products like EST4 life safety systems, Signature Optica™ detectors and Genesis™ LED notification appliances help keep buildings—and the people inside them—safe.

### EST4 Life Safety Solution

A highly flexible cutting-edge life safety and emergency communications platform.

### Signature Optica Detectors

Optica detectors use patented optical sensing to differentiate between hazards and nuisances.

### Genesis LED Series

Energy efficient horns, strobes and speakers that are quicker to install and more cost effective to operate than previous models.

## BREATHE EASY

You trust Edwards for all your life safety needs, and you need to be confident that your indoor air quality (IAQ) is getting the same level of expert attention. That's why Edwards has formed a strategic agreement with Airthings to provide our partner network with access to two of their bestselling IAQ products. The Hub for Business and Wave Plus for Business work in tandem to provide an outstanding overview of indoor air quality available, so buildings – and their occupants – can stay healthier. ### Wave Plus for Business

Wave Plus for Business is designed to give employers, facility managers and school administrators full visibility into all seven key factors of indoor air quality: radon, CO<sub>2</sub>, airborne chemicals and odors, humidity, temperature, air pressure and light. It's the ideal solution for measuring IAQ and when paired with The Hub for Business, pushes your data to the cloud where it is held securely while also being easily accessible to authorized users.

Wave Plus for Business has been tested and accredited by the RESET standard for accuracy and is fully approved by WELL, which can help your building become WELL Health-Safety certified.

### The Hub for Business

The Hub for Business is an integral part of the IAQ Ecosystem. Connect up to 30 battery-operated devices through Airthings Smartlink, a long-range and low-power wireless data extraction technology. This allows devices to be distributed around a large building, meaning real-time IAQ data is available to users anytime, anywhere.
